

Family: SAPOTACEAE (angiosperm)

Scientific name(s): Tieghemella heckelii
 Tieghemella africana
 Dumoria spp. (synonymous)

Commercial restriction: no commercial restriction

WOOD DESCRIPTION

Color: red brown
 Sapwood: clearly demarcated
 Texture: medium
 Grain: straight or interlocked
 Interlocked grain: marked but not frequent
 Note: Some logs are not floatable.
 Wood dark pink brown to dark red brown with sometimes purplish glints and/or pale veins slightly distinct. Often moiré.

LOG DESCRIPTION

Diameter: from 90 to 130 cm
 Thickness of sapwood: from 4 to 8 cm
 Floats: yes
 Log durability: good

PHYSICAL PROPERTIES

Physical and mechanical properties are based on mature heartwood specimens. These properties can vary greatly depending on origin and growth conditions.

	<u>Mean</u>	<u>Std dev.</u>
Specific gravity *:	0,69	0,05
Monnin hardness *:	4,0	1,5
Coeff. of volumetric shrinkage:	0,48 %	0,05 %
Total tangential shrinkage (TS):	7,3 %	0,5 %
Total radial shrinkage (RS):	5,6 %	0,6 %
TS/RS ratio:	1,3	
Fiber saturation point:	28 %	
Stability:	moderately stable to stable	

MECHANICAL AND ACOUSTIC PROPERTIES

	<u>Mean</u>	<u>Std dev.</u>
Crushing strength *:	59 MPa	10 MPa
Static bending strength *:	98 MPa	17 MPa
Modulus of elasticity *:	13850 MPa	1908 MPa

(*: at 12% moisture content, with 1 MPa = 1 N/mm²)

Musical quality factor: 92,5 measured at 2213 Hz

NATURAL DURABILITY AND TREATABILITY

Fungi and termite resistance refers to end-uses under temperate climate. Except for special comments on sapwood, natural durability is based on mature heartwood. Sapwood must always be considered as non-durable against wood degrading agents.

E.N. = Euro Norm

Funghi (according to E.N. standards): class 1 - very durable

Dry wood borers: durable - sapwood demarcated (risk limited to sapwood)

Termites (according to E.N. standards): class D - durable

Treatability (according to E.N. standards): class 4 - not permeable

Use class ensured by natural durability: class 4 - in ground or fresh water contact

Species covering the use class 5: Yes

Note: This species is listed in the European standard NF EN 350-2.

It naturally covers the use class 5 (end-uses in marine environment or in brackish water) due to its high silica content.

According to the European standard NF EN 335, performance length might be modified by the intensity of end-use exposition.

REQUIREMENT OF A PRESERVATIVE TREATMENT

Against dry wood borer attacks: does not require any preservative treatment

In case of risk of temporary humidification: does not require any preservative treatment

In case of risk of permanent humidification: does not require any preservative treatment

DRYING

Drying rate: normal	Possible drying schedule: 2			
Risk of distortion: slight risk		Temperature (°C)		
Risk of casehardening: no	M.C. (%)	dry-bulb	wet-bulb	Air humidity (%)
Risk of checking: slight risk	Green	50	47	84
Risk of collapse: no	40	50	45	75
Note: Initial surface drying prior to kiln drying is recommended in order to reduce defects.	30	55	47	67
	20	70	55	47
	15	75	58	44

This schedule is given for information only and is applicable to thickness lower or equal to 38 mm. It must be used in compliance with the code of practice. For thickness from 38 to 75 mm, the air relative humidity should be increased by 5 % at each step. For thickness over 75 mm, a 10 % increase should be considered.

SAWING AND MACHINING

Blunting effect: high
 Sawteeth recommended: stellite-tipped
 Cutting tools: tungsten carbide
 Peeling: good
 Slicing: good
 Note: Very irritant sawdust. Sometimes clogging of sawblades.

ASSEMBLING

Nailing / screwing: good but pre-boring necessary
 Gluing: correct
 Note: Tends to split when nailing. Gluing requires care (dense wood).

COMMERCIAL GRADING

Appearance grading for sawn timbers: According to SATA grading rules (1996)
 For the "General Purpose Market":
 Possible grading for square edged timbers: choix I, choix II, choix III, choix IV
 Possible grading for short length lumbers: choix I, choix II
 Possible grading for short length rafters: choix I, choix II, choix III
 For the "Special Market":
 Possible grading for strips and small boards (ou battens): choix I, choix II, choix III
 Possible grading for rafters: choix I, choix II, choix III

FIRE SAFETY

Conventional French grading: Thickness > 14 mm : M.3 (moderately inflammable)
 Thickness < 14 mm : M.4 (easily inflammable)
 Euroclasses grading: D s2 d0
 Default grading for solid wood, according to requirements of European standard EN 14081-1 annex C (April 2009). It concerns structural graded timber in vertical uses with mean density upper 0.35 and thickness upper 22 mm.

END-USES

Exterior joinery	Interior joinery
Flooring	Stairs (inside)
Bridges (parts not in contact with water or ground)	Interior panelling
Exterior panelling	Current furniture or furniture components
Sliced veneer	Cabinetwork (high class furniture)
Light carpentry	Ship building (ribs)
Ship building (planking and deck)	Veneer for interior of plywood
Veneer for back or face of plywood	Vehicle or container flooring
Sculpture	Turned goods
